Improving comfort in residential building

Flier:

Daniele Camatti, Pro S3 s.r.l.

In this article we describe how CFD was used in order to optimize the thermal comfort of a residential building. The objective of the study was to determine whether the arrangement of air-conditioning and heating devices was sufficient to keep the house comfortably cool in the summer and warm in the winter.

Industries:

[Building Services](#)^[2]

CD-adapco is the world's largest independent CFD focused provider of engineering simulation software, support and services. We have over 30 years of experience in delivering industrial strength engineering simulation.
