Intel

Intel recognizes you need more than just processors that deliver greater performance for your CD-adapco applications. Along with industry-leading microprocessors, Intel delivers platform technology solutions that combine processor, chipset, and software which optimize performance and improve throughput, giving engineering professionals the ability to solve problems faster, process larger data sets, and meet design challenges more effectively.

In addition, CD-adapco applications are registered with Intel® Cluster Ready (ICR - a program that simplifies buying, deploying, and managing HPC clusters) so you can be confident that ICR registered hardware and software components will work together, right out of the box.
